More information about each tour

Desert Agriculture- Arava

The tour will include site visits and detailed explanations by one of the leading farmers of the region. We will visit conventional and organic date plantations, the packing house, bell-pepper greenhouses and net-houses (which are typical for the region) as well as a pepper packinghouse.

The **regional Research and Development farm**. One of the station's researches will lead the tour in the farm to explore high level field agro research and innovative development of new crop, new Agro technologies and methods.

The tour will finish with a visit to the DESERT EPXERIENCE CENTER.

The tour is expected to last 4-5 hours net time.

Visit to the heart of vegetable production in Israel- Besor

The tour will include visits to greenhouses growing typical crops, like tomatoes, strawberries and other crops grown in the region. The second visit will be to a seedling nursery demonstrating the innovative concept of "Speedlings". We will finish the tour at the regional research and development farm, which has more than 50 years of experience in practical farming methods, acclimation of new crops to the region and developing feasible growing protocols for these crops and more.

The tour is expected to last 4-5 hours net time.

“The Best grapes in the Middle East” - Lachish Hills

The tour will include visits to table grape vineyards, pomegranate plantations, grapes packing house and raisins factory. The tour will be guided by one of the best expert for orchards and grapes.

The tour is expected to last 4-5 hours net time.

The wisdom of Israeli nurseries - Central-south region

The tour will include visit to the three leading nurseries in Israel: A world leader in supply of breeding materials for flower and ornamental plants, the leading Israeli vegetable, fresh herb and flowers nursery.

The third visit will be to a strawberry propagator with exclusive Israeli Strawberry varieties.

We will finish the day at NaanDanJain – world leader in smart irrigation solutions.

The tour is expected to last 4-5-hour net at each location.

Sub - tropical Orchards – West & North Galilee

The visit will focus on sub-tropical orchards like mango, avocado and other plantations such as Litchi and banana. During the visit, we will see a young tree nursery and learn about the process of propagation. Two additional visits will take place in commercial large-scale orchards. We will visit a leading sorting and packing houses for fruits. The tour will end at AMIAD - world leader in filtration devices and solutions.

The tour is expected to last 4-5-hour net at each location.

The heart of Field Crops production - The “Jezreel Valley”

The visit will focus on field crops like processed tomatoes, garlic, fodder crops, maize, wheat and others. We will explore advanced irrigation technologies, cultivation and harvesting machinery and methodology. From the field, we will visit a dairy farm to see modern milking methods and technologies. We will finish at a Milk Products factory.

The tour is expected to last 4-5-hour net at each location.

Apples - The Golan Heights

The region is famous for cultivation of deciduous trees, such as apples and pears. In addition - cherries, litchi and soft fruits like raspberries are also grown in the region, and we will visit a few plantations. The tour will also include a visit to a large Mango farm with advanced storage facilities. We will finish the tour in the east part of the Galilee, visiting Stone Fruits orchards (mainly peach and plums) and a packing house.

The tour is expected to last 4-5-hour net at each location.

The tour is expected to last 4-5-hour net at each location.
